What Is Our Solution to Dremel?

Research Question: How can Dremel automatically identify rising UK DIY YouTube trends and instantly convert them into actionable creator briefs without overwhelming the marketing team?

The Objective

- Monitor UK DIY YouTube automatically
- Score trends mathematically — not manually
- Convert insights into creator briefs instantly

Target Group

- Shift focus to the 'DIYer New'
- Arts & Craft, Furniture Flips, Upcycling
- Dremel's underserved creative YouTube audience

Working of the Solution

- Decay scoring removes old-content bias
- NLP Whitelist cuts construction noise
- GEMINI AI writing briefs for posting

Q What Is the Current Diagnosis?

Overwhelmed Team

Trends change every second. Manual monitoring is too slow and too resource-heavy for Dremel's small marketing team.

Too Much Noise

Generic scrapers surface heavy construction content that is irrelevant to the aesthetic 'DIYer New' audience Dremel wants to reach.

No Action Bridge

No automated link between spotting a trend and briefing a creator. That speed gap = missed micro-trend windows.

Diagnostic Snapshot

Content Noise Rate

HIGH

Non-target videos dominate raw scrape output

Manual Research Load

~4 hrs/wk

Per team member for trend monitoring alone

Trend-to-Brief Lag

3–5 days

From trend spotted to creator brief issued

Dremel UK Approach

Reactive

Responds to trends — doesn't predict them

DREMEL®

How Did We Solve the Problem?

Automated 5-Stage Pipeline Architecture

Overall, the tool doesn't just surface data, it writes the complete influencer brief, ready to send. Zero manual effort.

Tools used: Gemini 2.5 Flash LLM · Loewenstein's Information Gap Theory · Streamlit Dashboard

DREMEL[®]

What Results Can We Show?

10

Unique Trends

What Are the Next Urgent Steps?

Each role-owner has one immediate action based on the engine's live output.

Sunder KH – Social Media Manager

▶ CV Emotion + Action Pair

Every Monday, use engine output to brief UK YouTube Shorts creators. Zero manual creator hunting.

Sai Kiran – Website Manager

▶ cv_color_hex Signal

When 'Moody/Dark' palette is detected as trending, update UK landing page hero images to match.

Sai Teja – Product Manager

▶ Velocity Score

Redirect ad spend toward Dremel tools tied to the top velocity pair. E.g. 'Restore Table' → sanding bits.

Gauri Agarwal – Email Marketing

▶ Gemini Brief Output

Use the Gemini strategic rationale directly in email copy. Zero writing time — paste and send.

Sanskar Sharma – 3rd Party Commerce

▶ Action Pair + Material

Align Amazon & retailer listing copy with the top action pair and material detected that week.

Utkarsh Sharma – Content Manager

▶ Full Brief Package

Commission UGC using the full Agentic Brief. Thumbnail instructions (emotion + color) are auto-generated.

conclusions

We built a fully automated pipeline that turns UK DIY YouTube data into ready-to-send influencer briefs in under 60 seconds.

Scientifically Scored

- Our model for Dremel intercepts micro-trends before they peak, not after.
- Thus, we make the best out of current trends and possible future ones

Zero Content Noise

- The model filters out all the other actions irrelevant to Dremel's product use cases and delivers only what matters to the target audience.
- Example: Not all DIY is Dremel's DIY.

From Data to Action

- The model is giving the power of automation to not only generate relevant content for users but also trend data into a full Information brief for content creators.
- Forming a Sustained Competitive Marketing Strategy

Dremel transforms from a brand that reacts to trends into a brand that owns them.
